

 AI Slot Machine Experiment — Evaluation Rubric

This rubric is used to evaluate each generated candidate across functionality, user experience, and code quality.

All scoring is done on a **1–5 scale** unless otherwise noted.

 1. Metadata (Logging Only)

Field	Description
Run ID	Unique ID (e.g. candidate-014)
Timestamp	ISO 8601 format
Model + Version	Exact model string used
Input Tokens	As reported by tool
Output Tokens	As reported by tool
Total Tokens	Input + Output
Wall Time (s)	Measured manually
Tool Time (s)	If provided
Files Produced	Count
File Names	List of files
Total LOC	Total lines of code
Runs in Browser	yes / no / partial

Category	Score (1–5)	Description
Runs Successfully		App launches without errors
Core Functionality		Slot machine spins, tracks tokens
Feature Completeness		Includes win/loss logic, UI updates
Interactivity		Buttons and controls work properly
Stability		Handles edge cases, doesn't crash
UI Design		Visual clarity and layout
Creativity / AI Satire		Incorporates humor or theme about AI
Feedback Clarity		Clear indication of results (win/loss/tokens)
Responsiveness		Smooth interactions, no lag
Enjoyability		Feels engaging and complete

Category	Score (1–5)	Description
Structure		Logical organization of files/code
Readability		Clear naming, comments
Modularity		Uses functions/components effectively
Correctness		Logic is sound, minimal bugs
Simplicity		Avoids unnecessary complexity

Category	Breakdown	Description
Unique Features / Drift Notes	What makes this run different?	
Missing Features / Bugs	What is broken or incomplete?	
App Summary	2–3 bullet summary of app behavior	
Code Summary	2–3 bullet summary of code quality
