

1. Clone the repository:

git clone <https://github.com/cse110-sp26-group18/The-One-Arm-AI-Slot-Machine-Experiment.git>

2. In `./step1/`, create your candidates folders like: **step1/candidate-001/**. The code and record for each experiment should put in the according folder. Each member is responsible for 4 or 5 candidates, from **candidate 001 to 050** totally. You can check your numbers on the google form:

https://docs.google.com/spreadsheets/d/1_1BhE7GV2ZigFiT8srxk45nAVquXhn2UCrz-3aXs8zw/edit?gid=3962323#gid=3962323

3. Install the extension: Claude Code for VS Code and Claude Code and Codex Assist - Chat History, Code Diffs & Usage

4. Open your candidate folder in vscode. **Make Sure to open the clean candidate folder in a new window!**
5. Click Claude extension. Set the config for model: **Claude Opus, Effort High**, and model's access: **Edit Automatically**. The screen will be like this:

5. Paste the prompt to claude: Create a slot machine app that uses vanilla web technology like HTML, CSS, JavaScript, and platform APIs. The slot machine should make fun of AI, as in you are winning tokens and spending tokens. When you submit the prompt, **record the time now with your phone**. The code will be finished in 2-3 mintues from my experience, so you should keep your eyes with it. **Record the time when code is finished with your phone again**.
6. After the generation, you can click the claude code assit extension in left tools bar, to see the usage of token and recorded work time.

7. Copy the template in `scripts/metrics-000.md` to your candidate folder, name it `metrics-0xx.md`, and then finish all record based on template. You can see a demo in `step1\candidate-021`. Record any insights if there are.
8. Commit and push your code and data to the repository.
